

Island Manager Report April 9, 2022

AppSheet Tech still needed

Thank you to Joseph Pentheroudakis has been working on the application called AppSheet for over 4 years. He built it to run the input on the iPads for ferry data and collection of fares. The office then uses the app for reconciling the daily receipts for each ferry run.

Joseph is stepping down from the occasional need to tweak the app and HMC needs a replacement for this task. Joseph is willing to train the next person. The replacement person must have a tech background.

Art Anderson & Associates Case Study

Art Anderson & Assoc will begin looking at the Charlie Wells in mid-April to gather knowledge about the current ferry as they work on a pro bono case study reviewing replacement options years down the road. Three replacement options would be considered: diesel propulsion plant, all electric (charged on shore) or a hybrid of the two. The study will include pros and cons of the options with rough estimates. They have also agreed to converting the ferry blueprints to PDF, at no charge. This will happen next week.

USCG Annual Inspection

- The USCG will attend to the Charlie Wells on Tuesday, April 19 for the annual inspection. The crew will be providing all information including testing of various valves and inspection of deck, cabins and voids, etc., and performing drills as requested. I will be onboard for any administrative questions such as drug testing consortium information. There will be no additional personnel onboard for this inspection.
- The inspection will begin after the 9:00 run and generally ends within 2 hours.

Key Peninsula Fire Department

Last week I met with Assistant Chief Jason Learned to address several issues including potential leaks of water and oil under the truck, fire season and future planning in hopes of ultimately moving the fire truck out of the community center.

A representative from KPFD will be at the May 14 board meeting to answer questions about concerns HMC members may have.

In addition, they will have Wildland Firefighters present a how-to for preparation for your homes for wildland fire season. They will likely use a home on the island as an example and discuss at the meeting.

KPFD has provided absorbent mats and drip pan under the truck for immediate help with the leakage

NOTE: these must be placed back under the truck every time the truck is moved out. The department will come out monthly to test the engine and provide new mats.

KPFD to schedule training for any who would like to certify to drive the fire engine.

Northwest Water Systems - Small System Management Plan – due Nov 2022

- NWS is managing develop of this plan and has begun work on it collecting documents and information. This is a very comprehensive plan require every ten years by the Washington State Department of Health

Reserve Study will occur in late April.

Small Boat Docks

Thank you to all that worked on and installed the docks last weekend!

Legal Liaison: There are 25 delinquencies; 10 with the attorney's office

Departments/Committees

Parks: Tracy Anspach

Roads/Water Maintenance: Dan Marten

Emergency Preparedness: Ken Higgins

Rules: Mike Fassio, no pending matters

Small Boat Docks: Sherri Anderson
