

Water System Construction Begins in Earnest

Our permits have been approved and issued, and water line construction will begin on Monday, April 2. Work will take place in the following area, known as “Loop #1”: East and West Madrona, from the pumphouse out to the north and south to South Herron Blvd (see attached map, marked in **red**). The next loop for water line installation will be Loop #5, marked in **blue**. [Click here](#) for map.

Any project questions need to be directed to the Island Manager, preferably at hmcmanager@herronisland.org. Although Claudia will be out of town next week, she will be actively monitoring email messages and conveying them either to the project engineer or to Judy Greinke, who will be filling in at the office on water related issues.

The Resident Inspection Crew – Rich Urfer, Charles Smith, Dana Gruber and Mike Shettlesworth, will be wearing green HMC vests and will be performing work monitoring the project as directed by the engineer. Please do not interrupt them or ask them project questions, as they have been directed to refer all questions to the Island Manager or Project Engineer.

Caution: Stay well back from the work crews and equipment. Do not interrupt them, and do not get behind them or their equipment. The Resident Inspectors are charged with keeping any observers 50 feet from the work in progress.

Reminder: Allow a little extra time to catch the ferry, in case you need to take an alternate route around the work crews.

If you are contacted and asked to confirm meter locations or other questions, please respond quickly, as the project will be moving as quickly as possible.

Thank you.
