

Water System Update – August 26, 2011

In the next two weeks, Baseline Engineering survey crews will be on the island marking the centerline of HMC roads. This will allow them to create a map overlaying the actual HMC road right of way onto the plat maps, and provide a good base of information for our water system contractor, once selected. The resulting map should also be available to post on our website (under maps), and will provide some help to members who are attempting to determine where their property boundaries are, and whether they might be encroaching on the roadway.

Please treat them with courtesy if you see them in your area.
