

HMC LOOKING FOR NEW ROAD WATERING TRUCK

March 17, 2009

Dear Members:

Our island's road watering truck is on the last of its many lives and repairs are likely to cost us more than the truck is worth. While it is still operational and may last out this year's upcoming "dust season", it is definitely in our best interest to be on the lookout for a new truck. The Roads Committee chairman and island management are keeping their eyes open for a new truck and are hoping that our membership can help. The vehicle we require to keep our dusty roads at bay will have a diesel engine, an automatic transmission, a 12' – 14' flatbed, and the capacity to carry 1600 gallons of saltwater. The water tank on our existing truck is designed to be movable to another flatbed truck, so a new tank is not required. If you know of an available truck, or have one you want to sell, please contact the island office at (253) 884-9350.
